

Diamond Chain & Guide Bars

EVERY link has a Diamond Segment!

Cuts faster!

Less stretch!

Lasts up to TWICE as long!

DITEQ C42 Diamond Chain

Longer life

- More torque can be placed on chain and bar due to less spacing.
- Gives greater life - up to 30% more surface area.
- Chain stretching is reduced because of pressure on each segment is lower.
- Cuts significantly faster when cutting through heavy reinforced concrete. More diamonds in contact with the material.
- Smoother Cutting & Less Vibration to the operator
- "Continuous Link Technology" diamond grinding - no jumping of the chain from missing segments.

Segments Quality

- Unique sandwich segment design maintains segment profile throughout chain life
- The sandwich design has harder outer shell that keeps the segment's profile throughout its life. The use of a soft bond in the center enables fast cutting, especially in heavy steel.
- Only top quality diamonds are used in the bond which increases speed and life.

Special Grinding

OPEN SEGMENTS- DITEQ chain is surface ground during the production, so the operator can start cutting immediately out of the box.

(In competitor's chain it can take more than 20 minutes to open the segment, even in abrasive material).

*Our competitor's chain - Notice that it only has **HALF** the number of Diamond segments compared to our Diamond Chain!*
